

# SMART FEEDBACK

## Managing Entropy at Scale

Bipin Pradeep Kumar

Bipin@Gaia.in

# Agenda

1. **Gaia Overview**
2. **SAAS – Solution As A Service offering**
3. **Scale and Disorder**
4. **Overcoming Disorder**

# Spectrum of Operation

**86%**

Of India's **Butter**  
Cold Supply Chain  
Effectiveness

**40%**

Of India's **Airport**  
**Passengers**  
Experience

**71%**

Of India's **Cheese**  
Cold Supply Chain  
Effectiveness

**10%**

Of **Indian Railways**  
Outsourced  
Housekeeping Tech

Monitored & Managed by Gaia Smart Feedback

# Smart Sites Monitored By Gaia

Campuses & Buildings

Warehouses

Railway/ Metro Station

Airports

Hospitals & Pharma

Food & Retail

City Public Infra

Railway Coaches

Clients choose SmartFeedback to get unified view of site performance and multiple benefits

**1** Real time, unified visibility into site performance

**2** Action Engine for alerts on status and breaches

**3** Optimize operations and experience

**4** Digitalize opaque manual process, reduce costs

**5** Governance monitoring of contracts

# Gaia Business Impact

**~ 70 Million**  
Discrete User Interaction  
Data Points Collected

**~ 150 Million**  
Streaming Sensor  
Data Points Collected

**~ 7 Million**  
Citizens or Users  
Touched Daily

**\$40+ Million**  
Annual Contract  
Value Monitored

**90+ Million**  
Square Feet  
Built Space Monitored

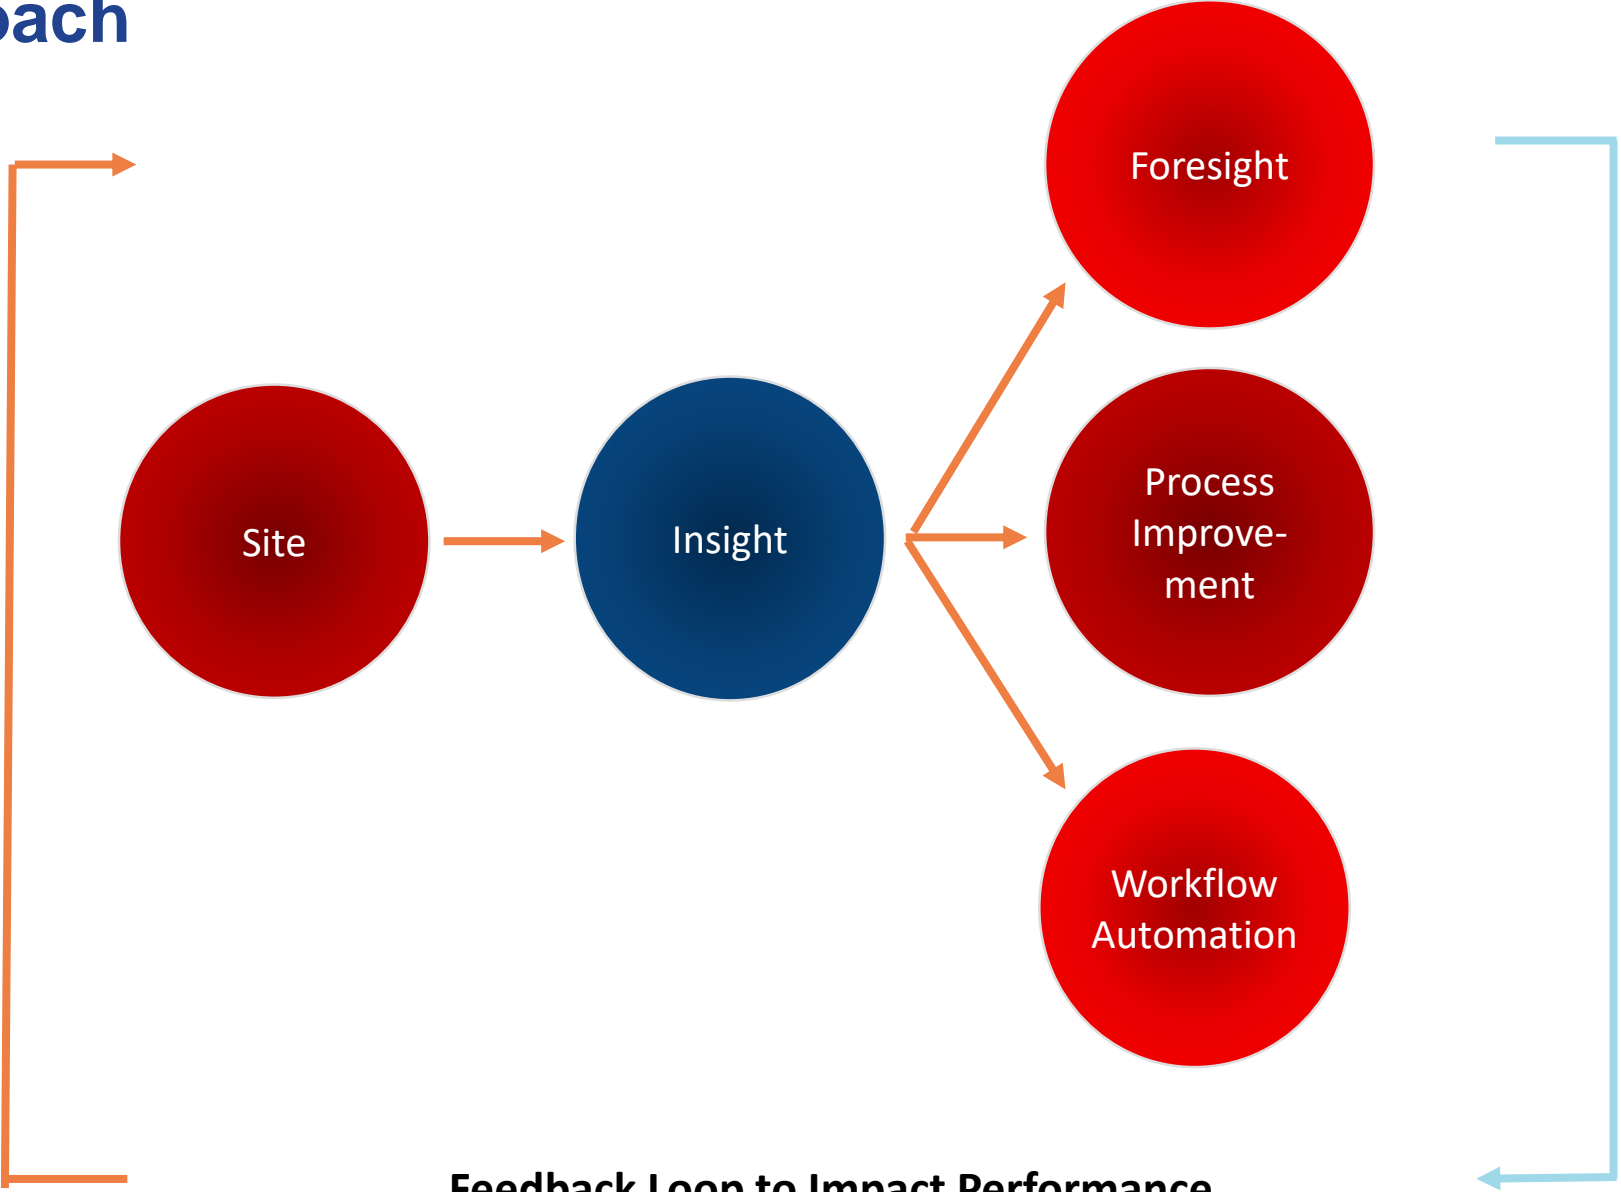

**440+ Million**  
Square Feet  
City Urban Area Monitored

**30%**  
Improvement in Efficiency  
Or Service Levels

# Gaia Approach

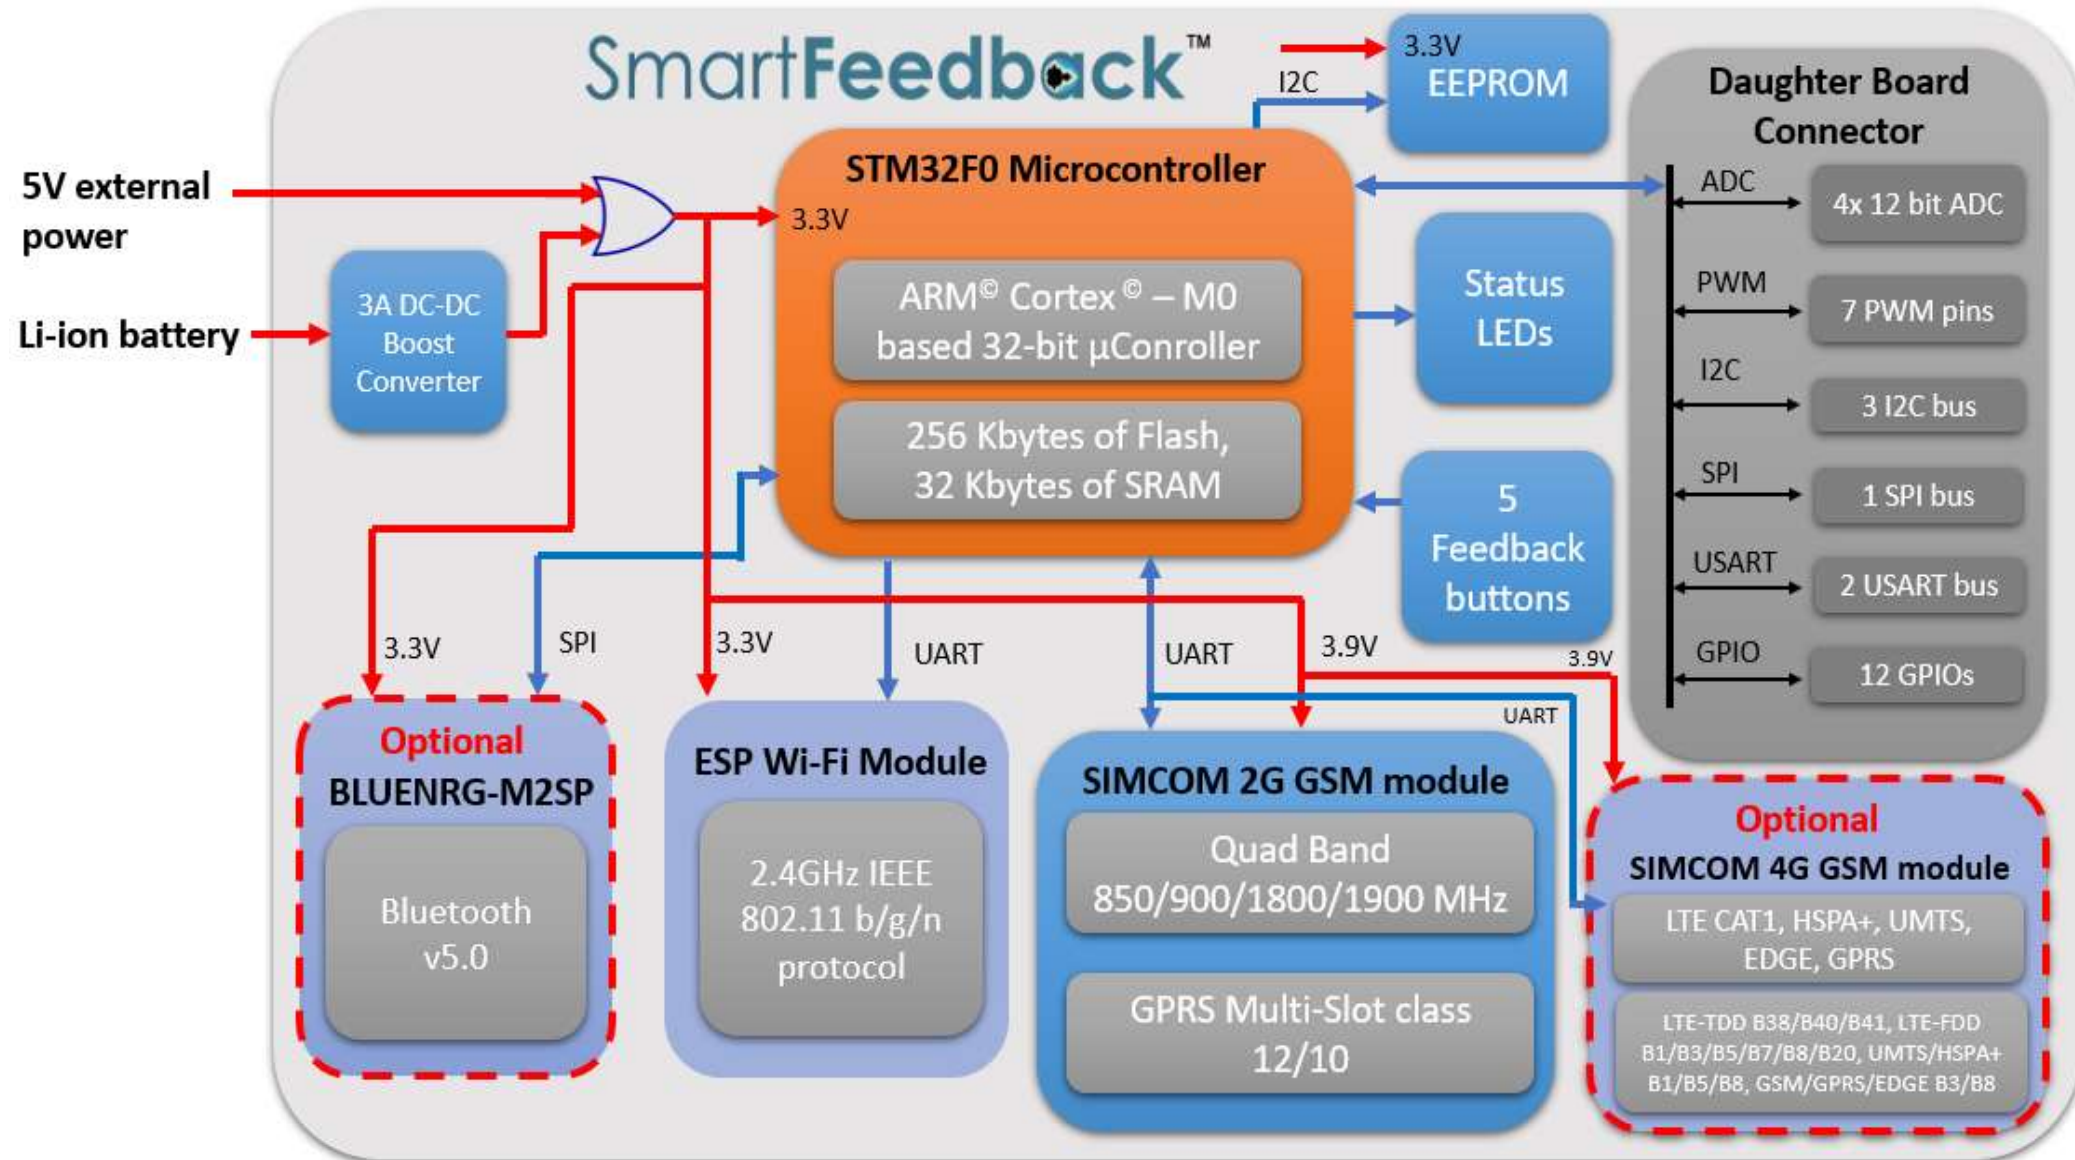

# The Intelligent Edge

Customer Intelligence. Site Intelligence

# Block Diagram

# Daughter board for sensors

- 1 SPI (SPI2)
- 3 I2C (I2C, I2C1, I2C2)
- 2 USART (USART1, UART6)
- 4 ADC 12bit (ADC\_IN4, ADC\_IN5, ADC\_IN6, ADC\_IN7)
- 7 PWM pins (PA4, PA6, PA7, PA9, PA10, PA11, PB13)
- 12 Digital I/O

# Daughter board & Sensors on BLE mesh

# Feedback to Process Improvement and Workflow Automation

## Action and Automation

From sensing & people

Measure Proximity  
Enhance Productivity

Monitor contact & temperature  
Ensure Quality

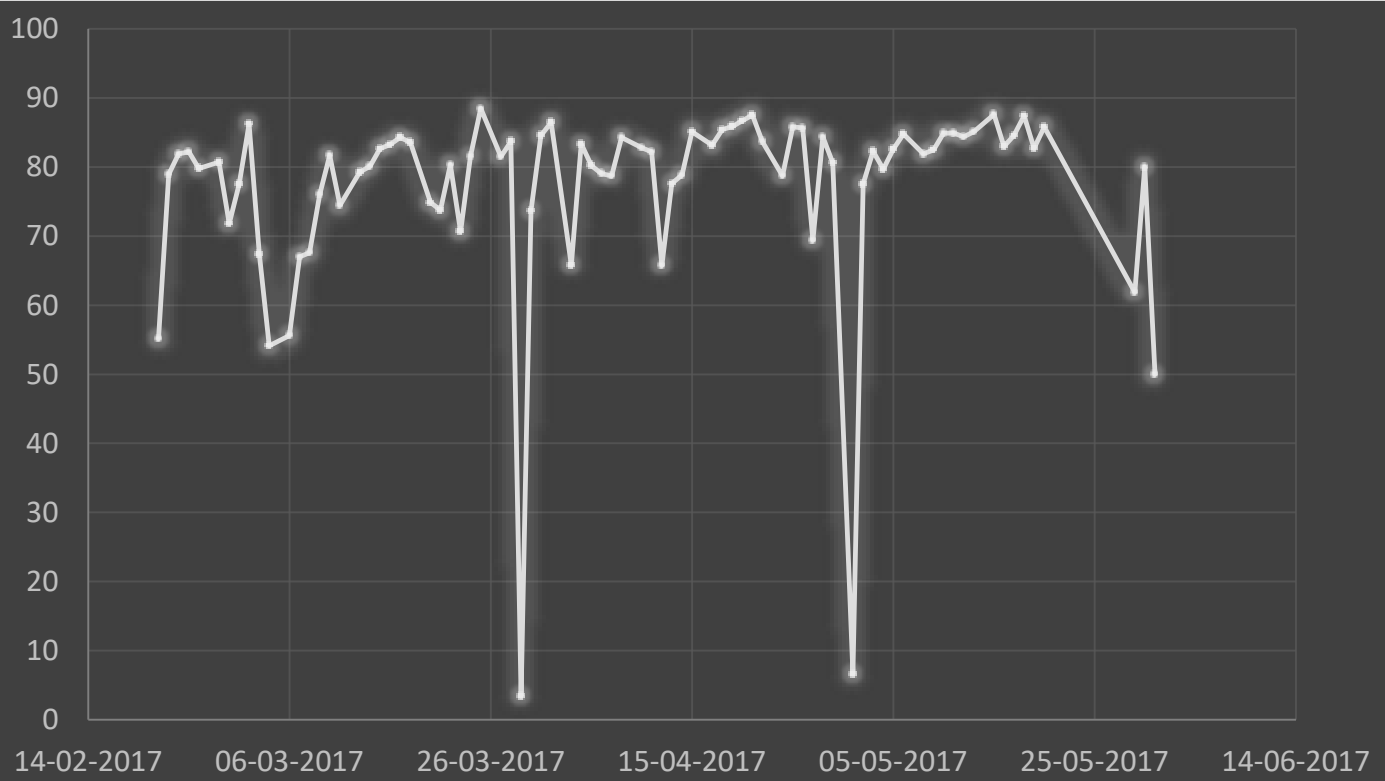

Detect gases  
Enforce Cleanliness

Measure voltage & current  
Ensure Efficiency

## Analytics and Prediction

From sensing & people

Measure Voltage at Manufacturing Plant

**Predict Productivity**

# Barriers to Scale: Disorder

## Second Law of Thermodynamics

# ENTROPY

The relentless march of disorder

# Entropy Relationships

1

Entropy of an IoT SAAS

Increases with  
(is directly proportional)

Number of devices.

2

Entropy of an IOT SAAS

Increases with  
(is directly proportional)

Number of locations.

3

Entropy of an IoT SAAS

Decreases with  
(is inversely proportional)

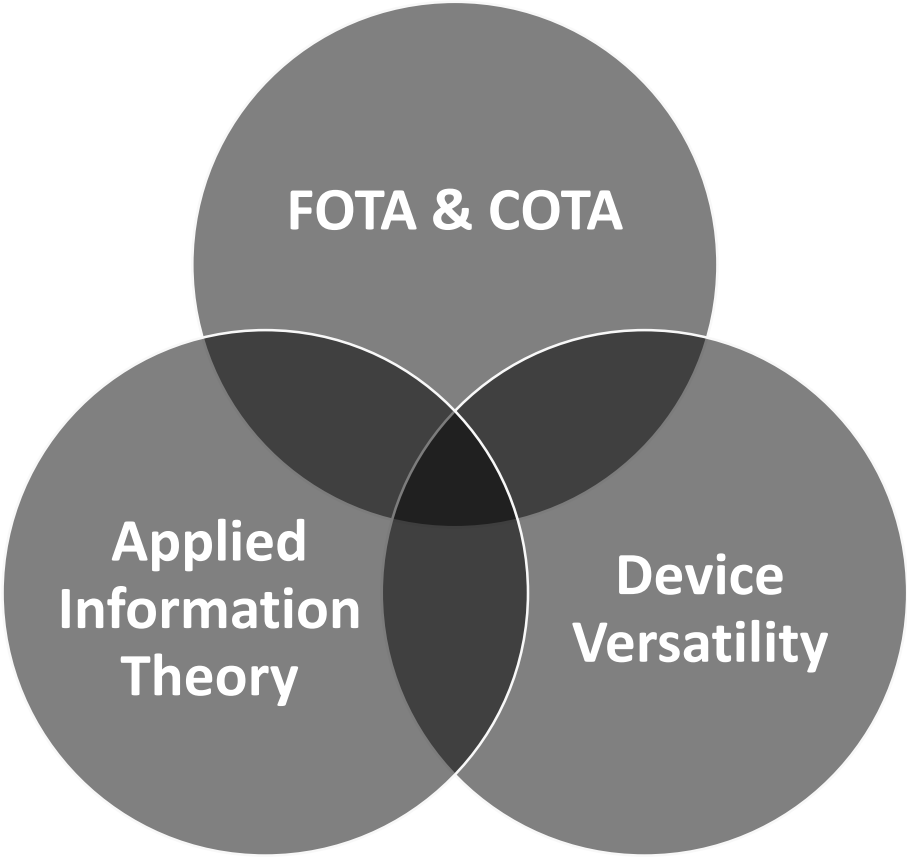

Security and Control Features

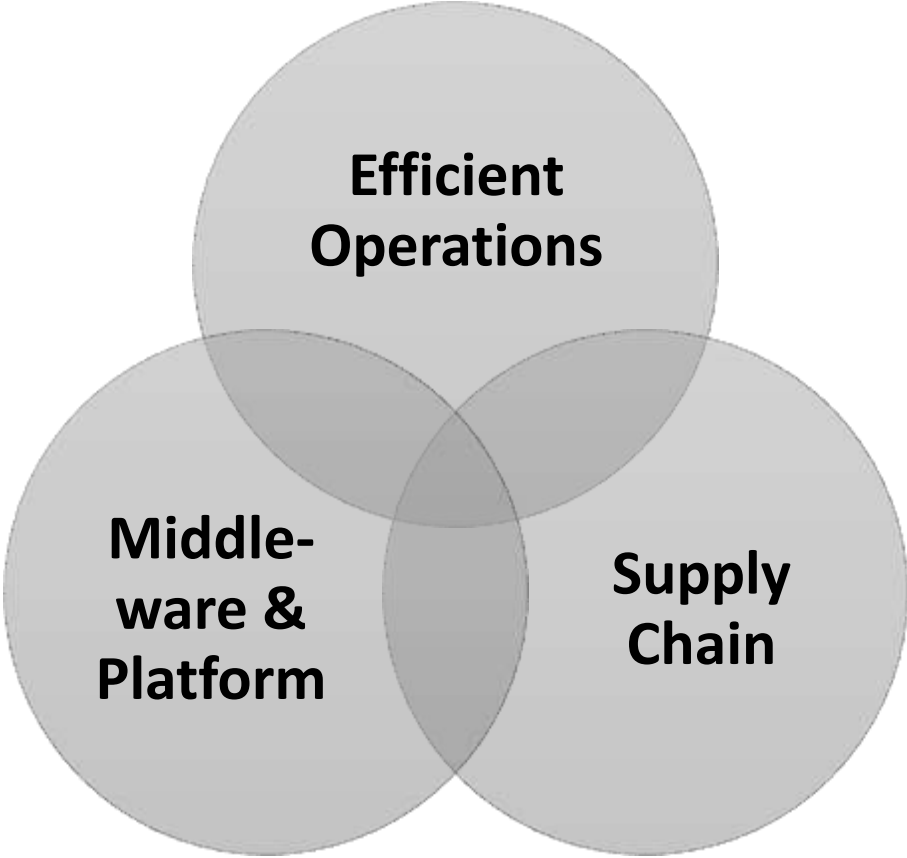

# To Violate Entropy

# Maxwell's Demons – an IoT perspective

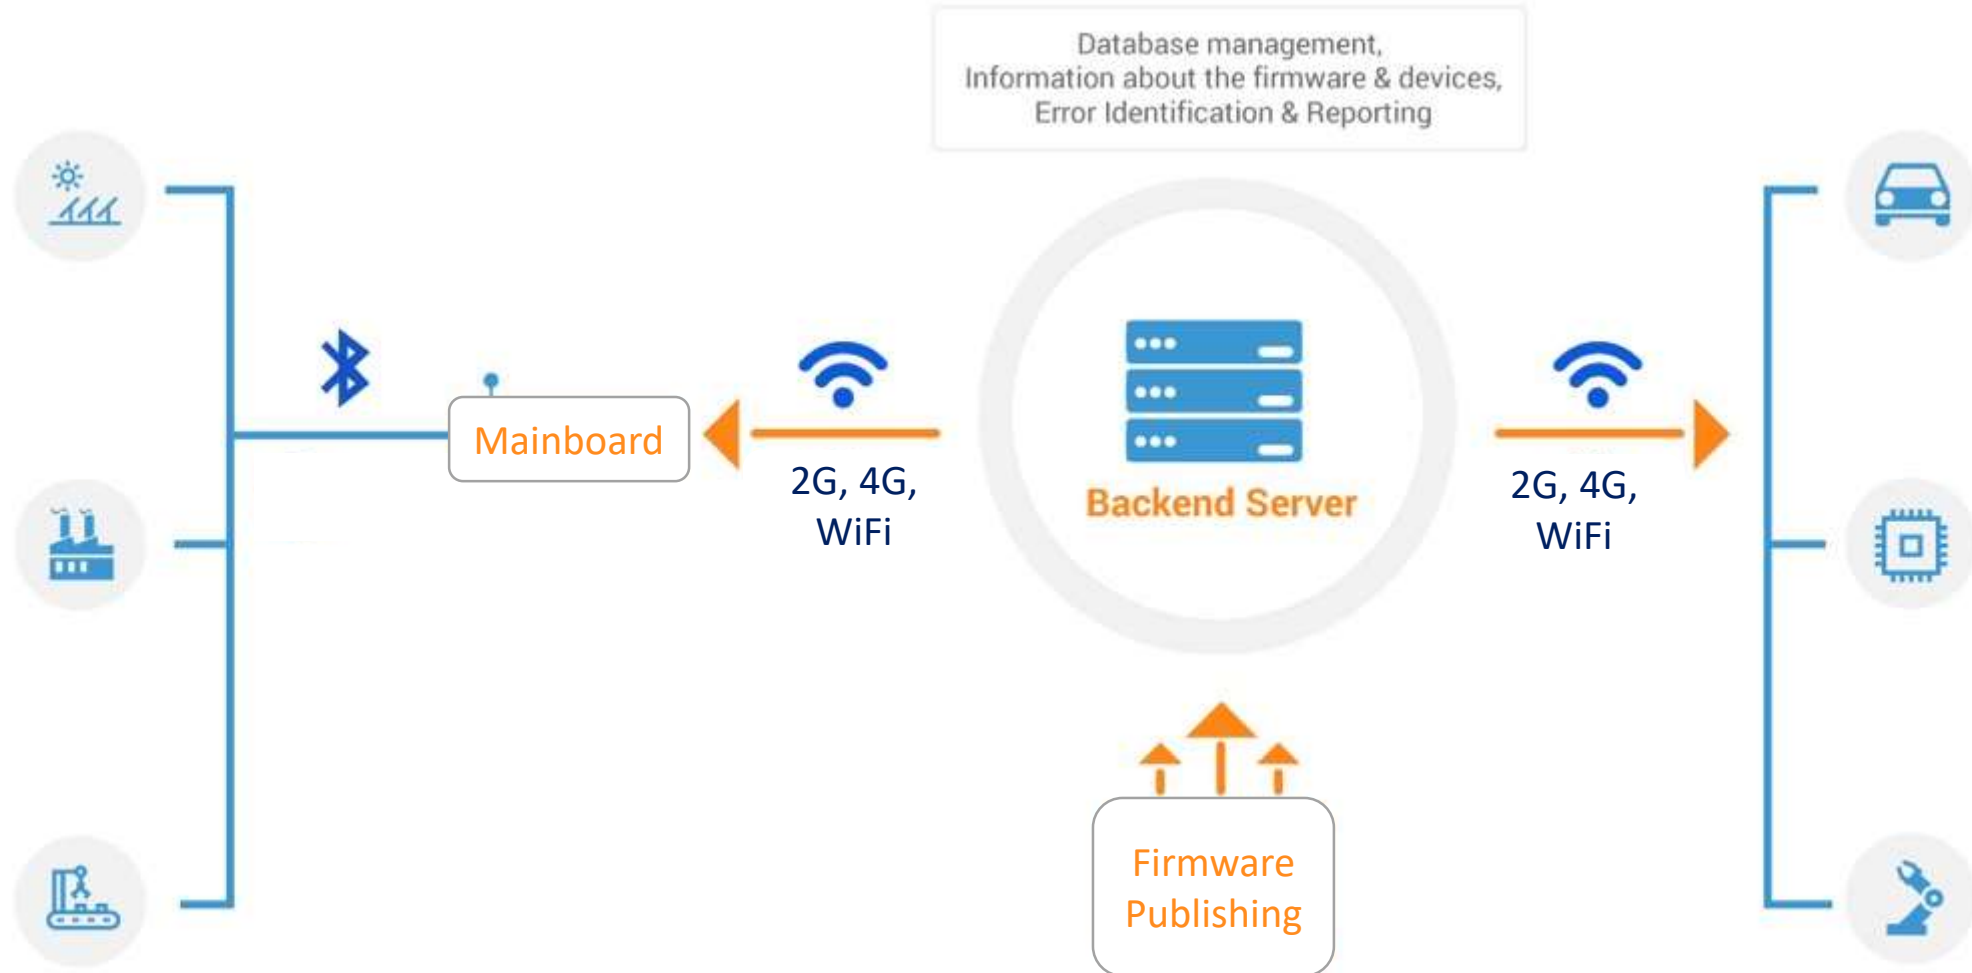

Device Level

Other Important stuff

# FOTA

Decreases disorder by increasing Remote Management

## 1

### Configuration Parameters

- a) Connection Details
- b) Server Details
- c) Intervals
- d) WiFi Details
- e) Indicator & Notification Details
- f) FOTA Details

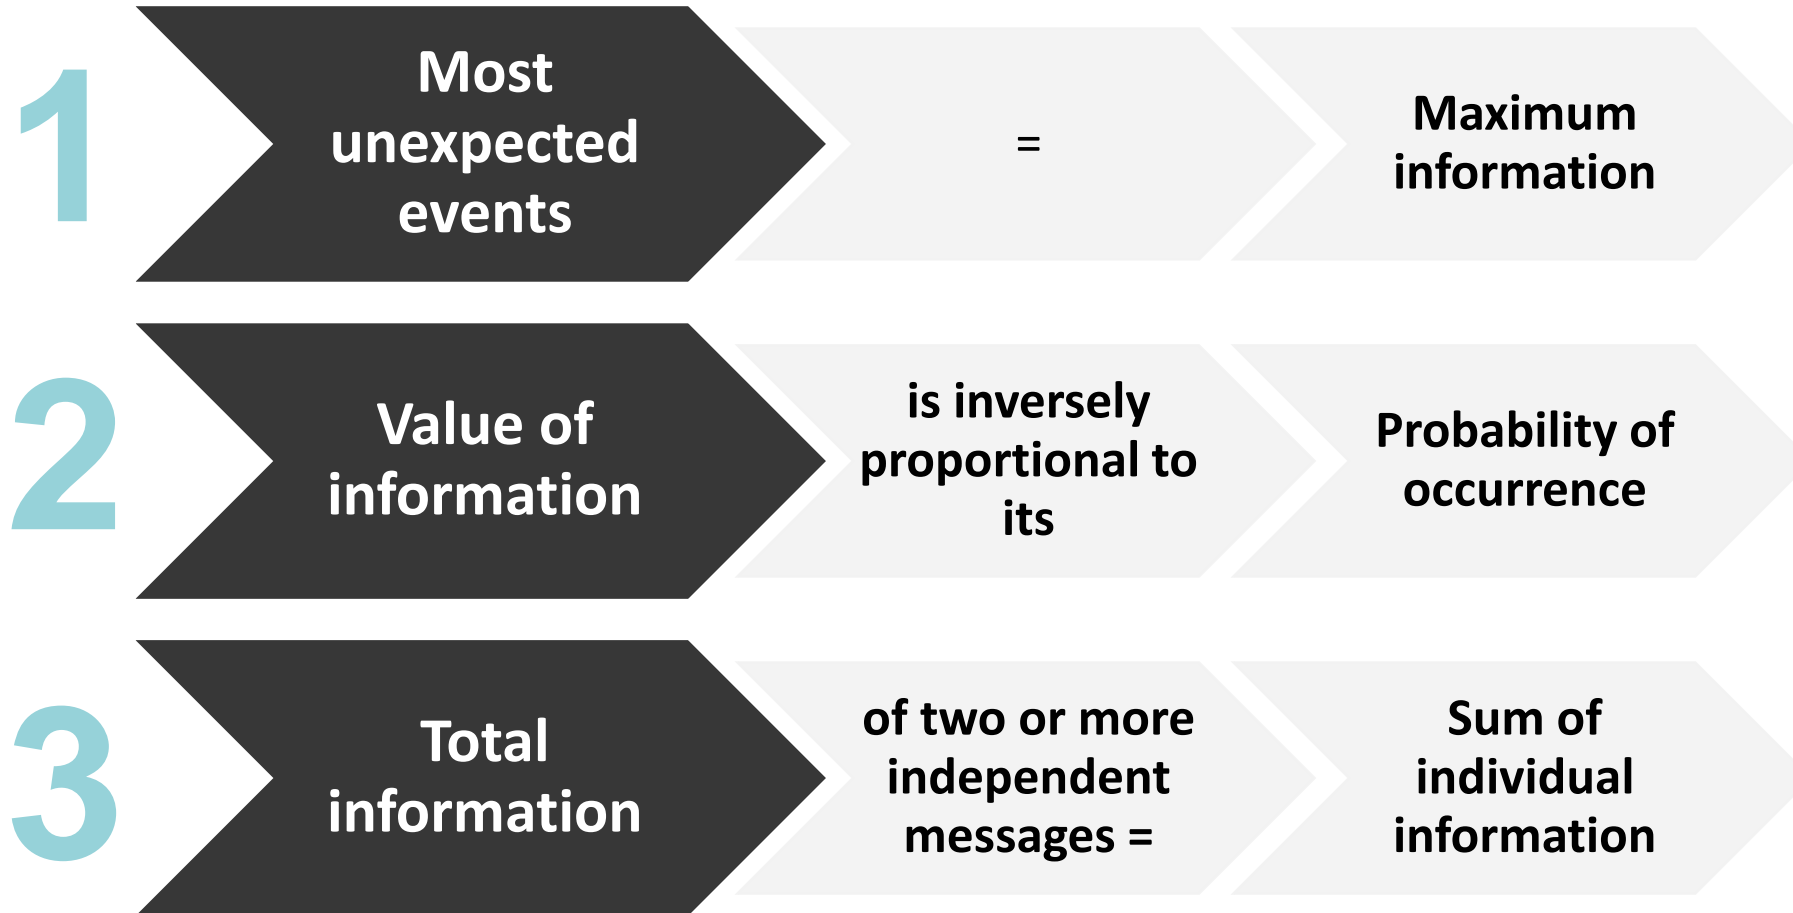

## 2

### Control Parameters

- a) Activation/Deactivation
- b) Switching modes
- c) Sensor Activation
- d) Reset

**Decreases disorder by increasing Remote Management**

# Applied Information Theory

Decreases disorder by increasing Edge Intelligence

# Device Versatility

## Communication

- 2G
- 3G
- 4G
- WiFi
- BLE

## Interfaces

- SPI
- I2C
- Digital IO
- USART
- PWM
- ADC

## Protocols

- JSON
- REST
- MQTT

## Storage

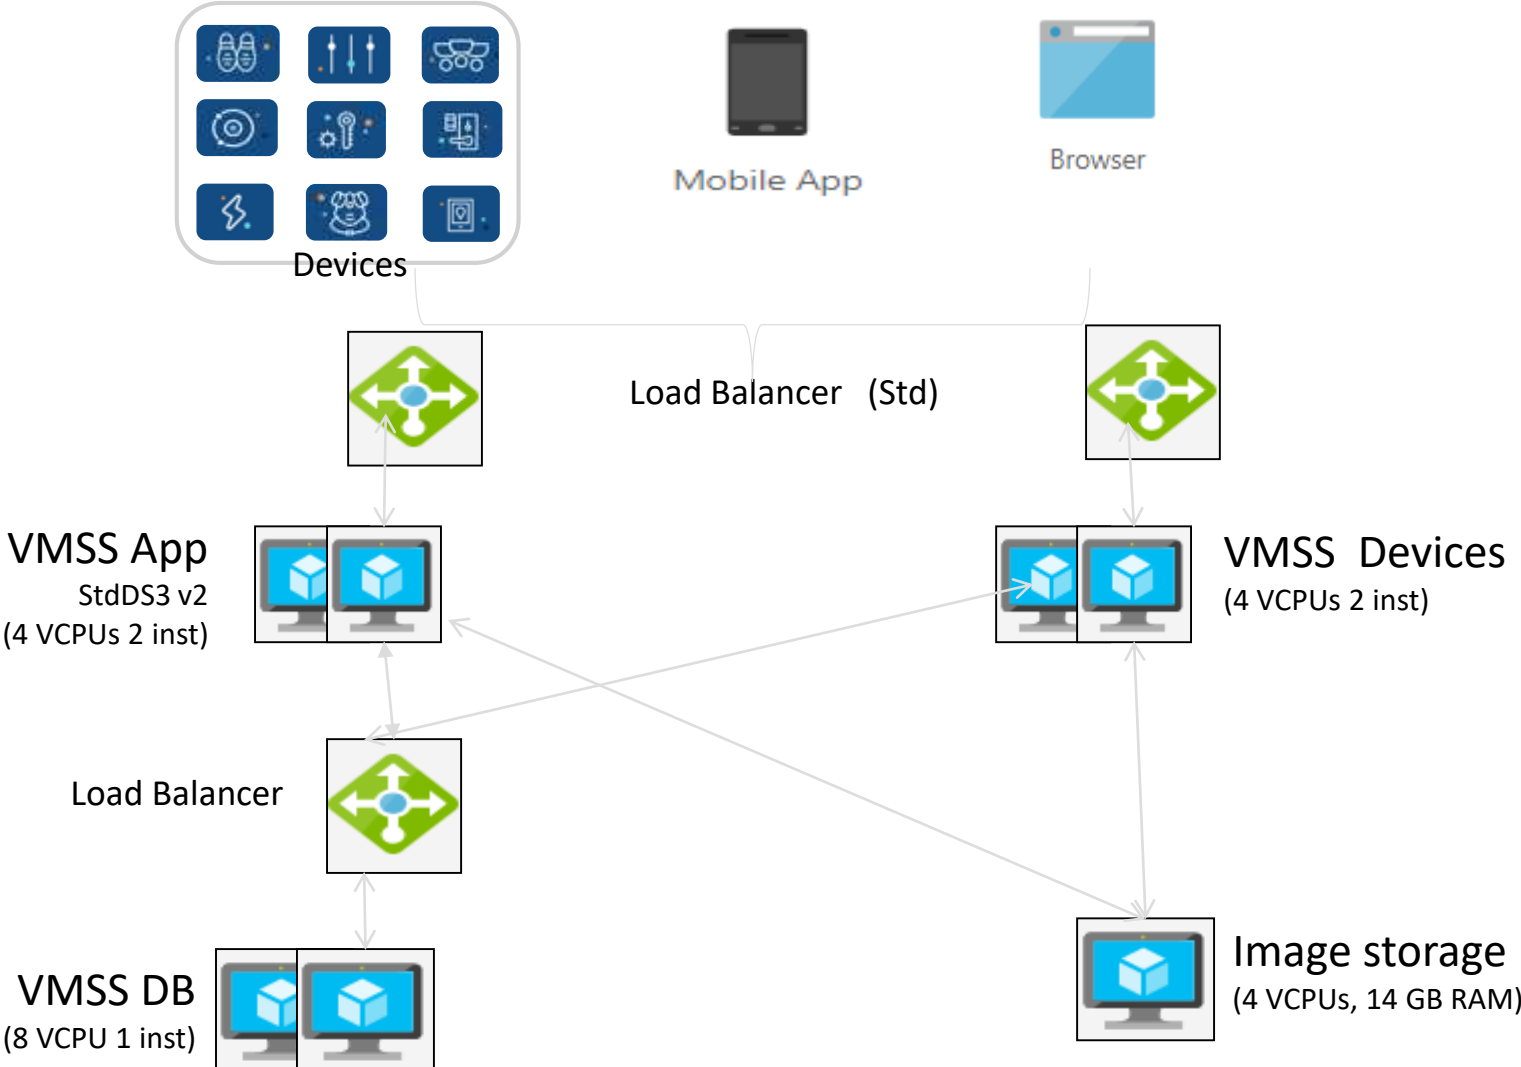

- On-board
- External

Decreases disorder by increasing Capabilities

# Middleware and Platform

Decreases disorder by ensuring Stability

To Conclude

# Entropy is Essential

Steady  
Deterministic Evolution

1

Optimise  
Exiting Business

2

Destruction  
To Create

3

**Thank You**
