- Partners in Software development services and solutions

- Industrial automation solutions, IOT solutions etc.

- Localization and Globalization

Case studies
Industrial automation projects
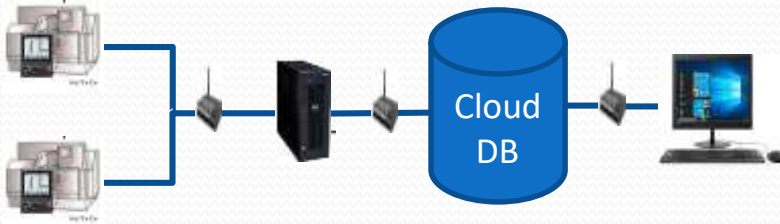

FA Device Data Backup Tool

This application is used for **automatic backup** of CNC/PLC/HMI machines.

Primary purpose of the application is to have latest backup of data/settings ready, so that in case if data on machine is changed inadvertently, restoration can be done swiftly.

➢ Backup can be scheduled Daily/Weekly/Monthly

➢ User can register machines by entering details such as IP address etc.

➢ User can specify the retention period of backup data

➢ No manual intervention is required thereby increasing efficiency and eliminating any mistakes due to human error

# **Factory** Data Visualization

This tool makes monitoring of all CNC machines in the factory easier, with the user being able to **remotely monitor the status** of each machine from his PC without having to be physically present near the machine.

➢ Status of all the machines can be checked at a glance

➢ Both Operation and Maintenance related data can be viewed

➢ Machine data can also be stored in Cloud DB which can be used for access from anywhere (* Data can be stored locally as well)

➢ Data stored can be used for analysis and predictive maintenance

Next Focus: Edge Computing

- ➢ Edgecross is a consortium which aims to go beyond the bounds of companies and industries, and enables FA and IT cooperation

- ➢ Nichi-In is a member of Edgecross consortium and we have started working on Edge Computing

- ➢ Our aim is to work on Industrial automation and provide optimal solutions
